Listen to the embedded audio clips above for the answer! If the floor is severely worn or damaged, use scrap flooring to patch it. You will need a part of the floor that is a little bigger than the bad place, with the same pattern. Step 1: Place scrap on top of the defective area to completely cover the damage and align the pattern exactly with the floor pattern. Step 2: Use the package seal tape around the edge and tape the patch firmly to the floor. Then cut the rectangle through the flooring below it through the scrap piece, with a straight edge and a sharp utility knife. Greater than damaged area. If possible, cut along the joint or line of the pattern to make the patch harder to see. Make sure the corners are cut cleanly. Step 3: When the flooring is cut, remove the scrap piece tape and push out the rectangular patch. Heat the old flooring in the cut line with a clothing iron and set it to medium heat to soften. First, cover the patch area with aluminum foil, and then cover with a clean cloth. Press until the glue that holds the flooring is soft. Carefully pry into the damaged areas with paint scrapers or putty knives. Shave all the old glue from the floor to make a clean base for the patch. If there are gouges on the floor, fill them with water putty and let them dry completely. Step 4: Install the patch at the opening if it binds a little, you can sand the edges slightly with medium grit or fine grit paper to adjust the fit. When the patch fits correctly, spread a thin coat of floor tile glue into the opening with a notched tort or spreader. Then set the patch on the gap and push firmly and wipe off the excess glue around the edges. Step 5: Heat seal the edges on the main sheet of the flooring. As mentioned above, protect the floor with aluminum foil and clean cloth. Press the edge firmly and quickly with hot iron. Step 6: After gluing the edges, firmly weight the entire patch and cure the adhesive according to the manufacturer's instructions. Once the adhesive has completely hardened, remove the weight. Do not wash the floor for at least a week. Elastic flooring is very useful, especially in large areas, but it is hard to beat the elegant beauty of hardwood flooring. Of course, repairing hardwood floors is not as easy as cutting and gluing patches, as you learned on this page.
